(54) OPERATIONAL CAPABILITY EVALUATION SYSTEM

(57)Abstract:

PURPOSE: To enable processing with through calculation including statistical processing by accumulating and recording the operation signal of a plurality of device by a plurality of users and operation response signal together with time marker and attribute and comparing and correlating them with the correct procedure.

CONSTITUTION: An operation response signal detector 11 detects operation signal indicating the operation meaning of a plurality of devices of a plurality of users and response signal representing the response of the devices and sends them to a signal recorder 13 together with time marker and the attribute of the devices. A signal judgment part 33 compares the information carried by the signal from the recorder 13 with that of the operation response signal DB (data base) 32 and sends the result to a history information recorder 41. A history analyzer 44 compares the contents of the recorder 41 and the contents of correct procedure DB 43 to detect and analyze mismatch and outputs the results in the recorder 41. A calculation processor 45 surveys the contents of the recorder 41 in accordance with the analytical purpose, performs various data processing such as statistical calculation and stores the calculation results in a calculation result recorder 46. The contents of the recorder 41 and 46 are displayed on a display 47 according to the analytical purpose.

LEGAL STATUS

[Date of request for examination] 29.05.2000

[Date of sending the examiner's decision of rejection] 20.08.2002

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's decision of rejection]

[Date of requesting appeal against examiner's decision of rejection]

[Date of extinction of right]
